fax +39 059 356096 - eventimkt@unimark4.it

The establishment of the "Sustainable Architecture" Prize, in collaboration with Fassa S.p.A., is a prominent example of the role that an industrial partner can play in cooperation with a university. This International Prize, which in 2012 is being held for the tenth time, has grown over the years in stride with the increasing widening of collective and technical awareness. Our resolve and clear conviction that we are contributing to the development of opportunities for knowledge and the exchange of ideas have helped us achieve the ambitious objective of being recognised as one of the most prestigious European awards on sustainability.

The "Architecture > Energy" Centre carries out research work and provides consulting services aimed at increasing the energy efficiency and environmental quality of buildings, both as regards new constructions and the renovation and restoration of existing buildings, including important historical sites. The Centre specifically deals with creating design guidelines for both building and town planning, applied research on special systems and technology powered by renewable energy sources, scientific supervision, promotion and organisation of training activities. The Centre is based at Ferrara University Department of Architecture.
