CONCEPT – The office center of this wood-processing company shows an innovative economy oriented towards bioclimatic and sustainable integration with the environment.

In the project, the concept was developed by a team of talented architects, engineers, and a bioclimatic designer. The goal was to create a building that is both an office center and a part of the natural environment.

The project features a unique combination of different architectural elements, including a roof that extends over the exterior walls and is made of natural materials. The roof is designed to protect the building from the elements and to provide natural light to the offices.

REMARKABLE FEATURES – The office center stands out for its use of natural materials and its integration with the environment. The building is designed to be energy-efficient and to minimize its impact on the surrounding landscape.

The office center is a model for sustainable architecture, with its use of natural materials, its energy-efficient systems, and its integration with the environment. It is a testament to the power of innovation and the importance of sustainable design in the modern world.
